I've drafted the whole 100-page report for this entire project timeline after extensively reviewing the GitHub repo. This includes the code, design docs and the minutes. Everywhere that says "placeholder" is to be replaced with a screenshot of what's required by the description. You guys never uploaded the interview questions or results so this part is missing from the document. This is a built up from the 8-page doc that was previously written about semester 1. You can use it for the report you guys that you guys already have been working on.

If you don't want to use it, I've included a document with just the stuff we've done in 2nd semester as Hussain wanted.

I've also included the group contribution form that we have to submit before the 2nd of May. I've done my part. Write up your parts and we can review the contributions before submitting.
